

COMPACT HARVESTING BELT

The Compact harvesting belt is great to be used in small harvesting groups, it structures your harvesting process by eliminating unnecessary movement. It is a simple and light conveyor and therefore very easy to use.

The support is constructed in a way that enables you to use it on different types of harvesting trailers. Because of the small angle, the Compact harvesting belt is very suited to be used for heavier crops like melon, cabbage and pumpkin. Power comes from the hydraulic circuit of the tractor, so it is plug-and-play to your equipment.

SPECS
