

ALPHA HARVESTING BELT

The Alpha harvesting belt is able to harvest different types of crops. For cabbage it is often used to fill big boxes but it is also usable for the smaller fresh market EPS crates. The Alpha is one of our first and most sold models and therefore a trusted and proven concept. By eliminating unnecessary movement of the workers they can work more efficiently and more structured. Labour will be saved!

The harvesting belt will be designed for your current harvesting trailers so that there is no need to invest in new ones. However, multiple trailers will make your process more effective and efficient. The length of the harvesting belt will be determined by the amount of rows or beds that need to be harvested. Because the harvesting belt uses the hydraulic circuit of the tractor, it will plug-and-play to connect the harvesting belt.

SPECS

Length
6m - 12m

Width
27cm - 57cm

Total weight
from 100kg

Efficiency
+ 45%

Capacity
9,500kg/hour

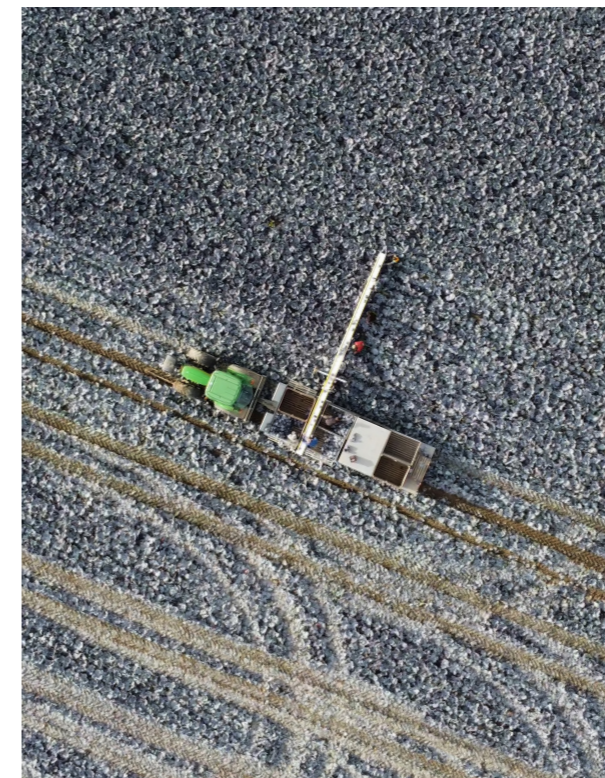

For EPS and
big boxes
